Technology Used:

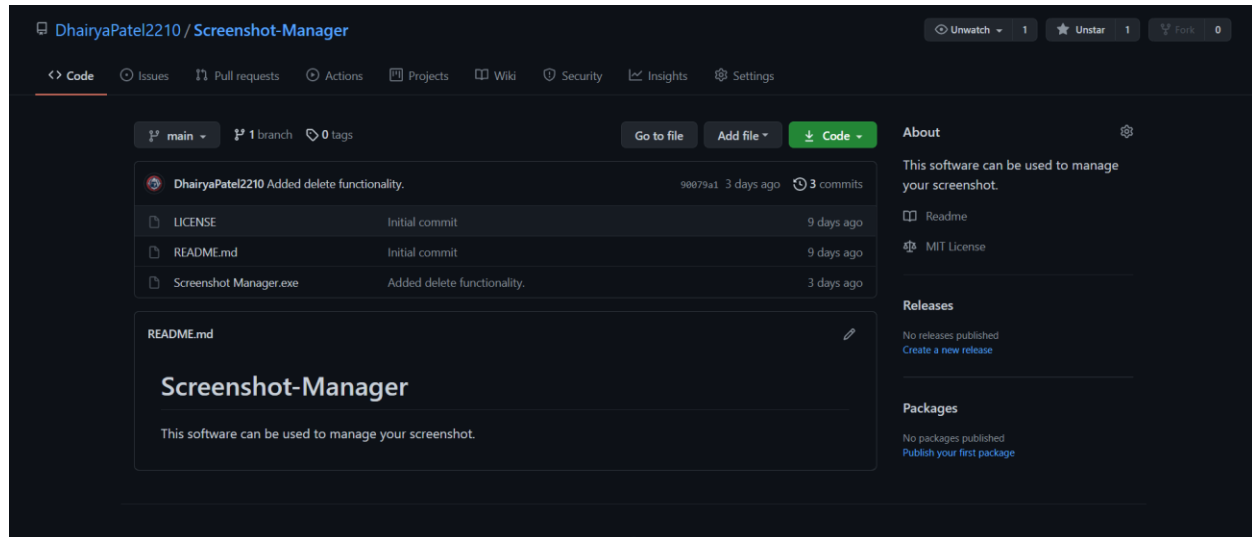

Python, Tkinter, Operating System, GUI Programming

Abstract:

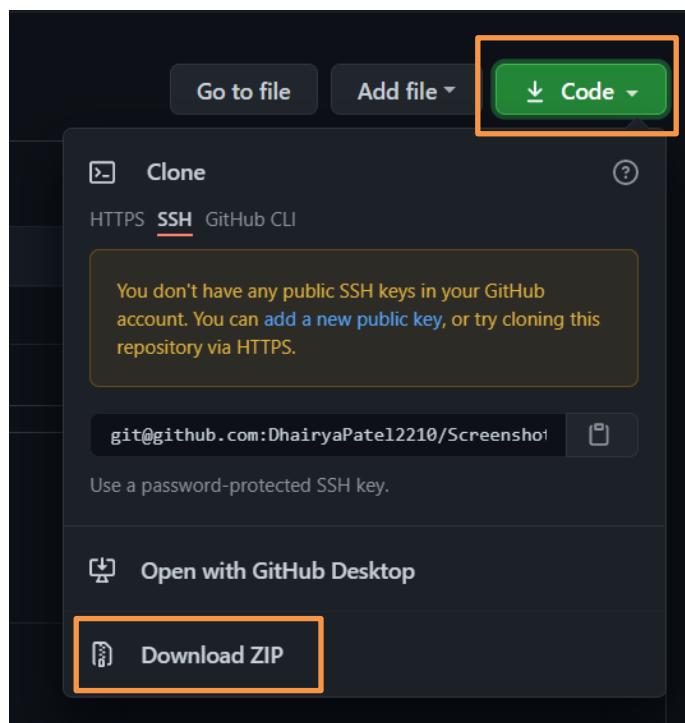

In today's online era, all education is completely become online and during our classes we take many screenshots, But after day or two we are unable to find it where is the our screenshot which we have saved on some date. So to remove that barrier for learning I have developed one software using which you are able to manage your screenshots easily, I have developed it in such a way that it will not affect your CPU power and it will run in background. You just need to enter timings and folder path once, hardly it will take 15 mins to setup and after that you education life will be lot more easier. If you wish to see some new features then let me know on [linkedin](#). Hope you will enjoy using this software.

How to Install Screenshot Manager?

1. Click on the below link, it will redirect you to Github.

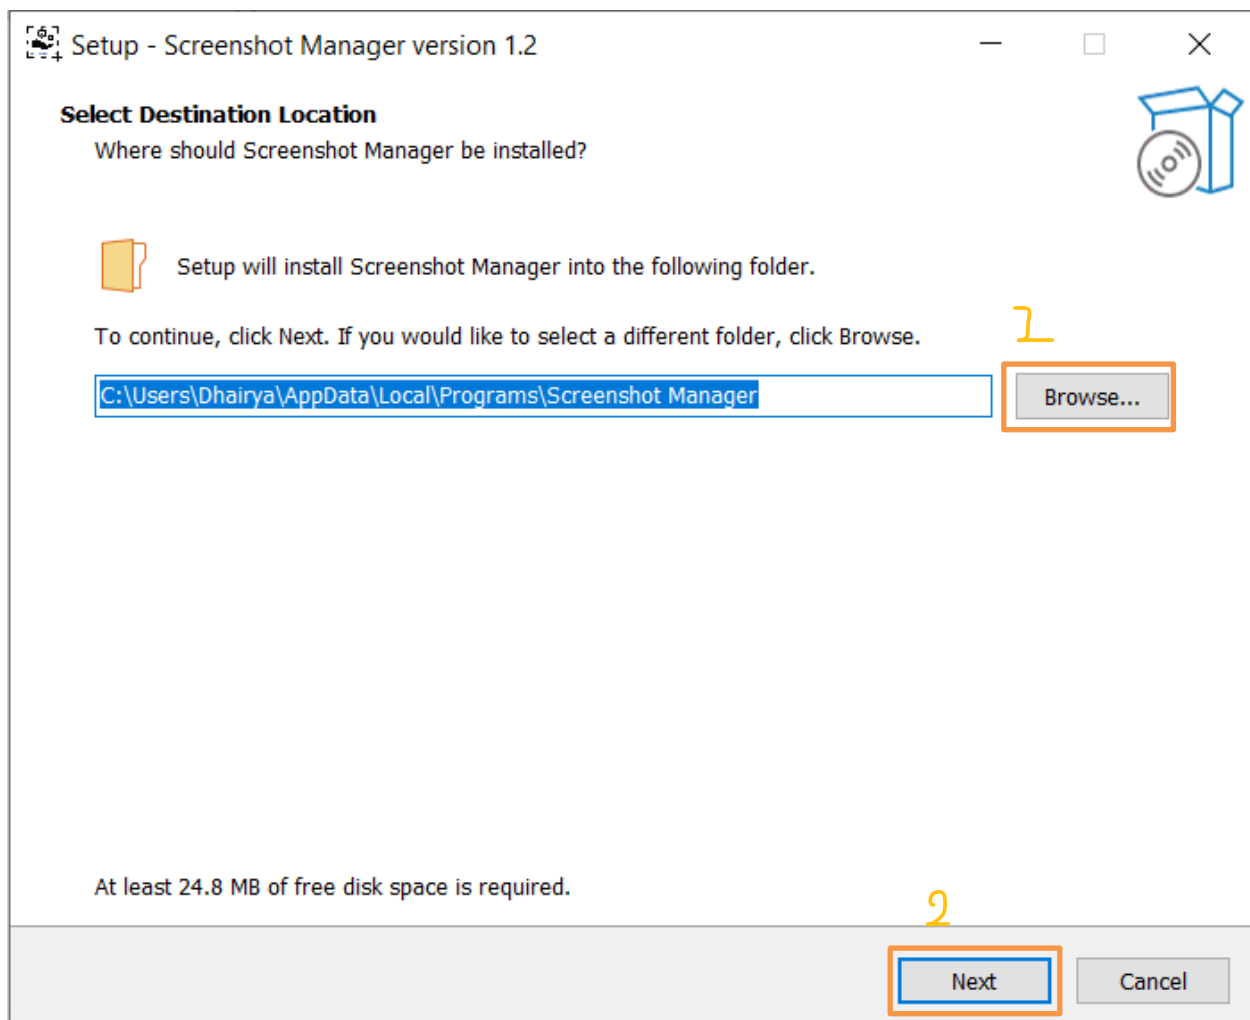

2. Now click on Code and after that click on download zip.

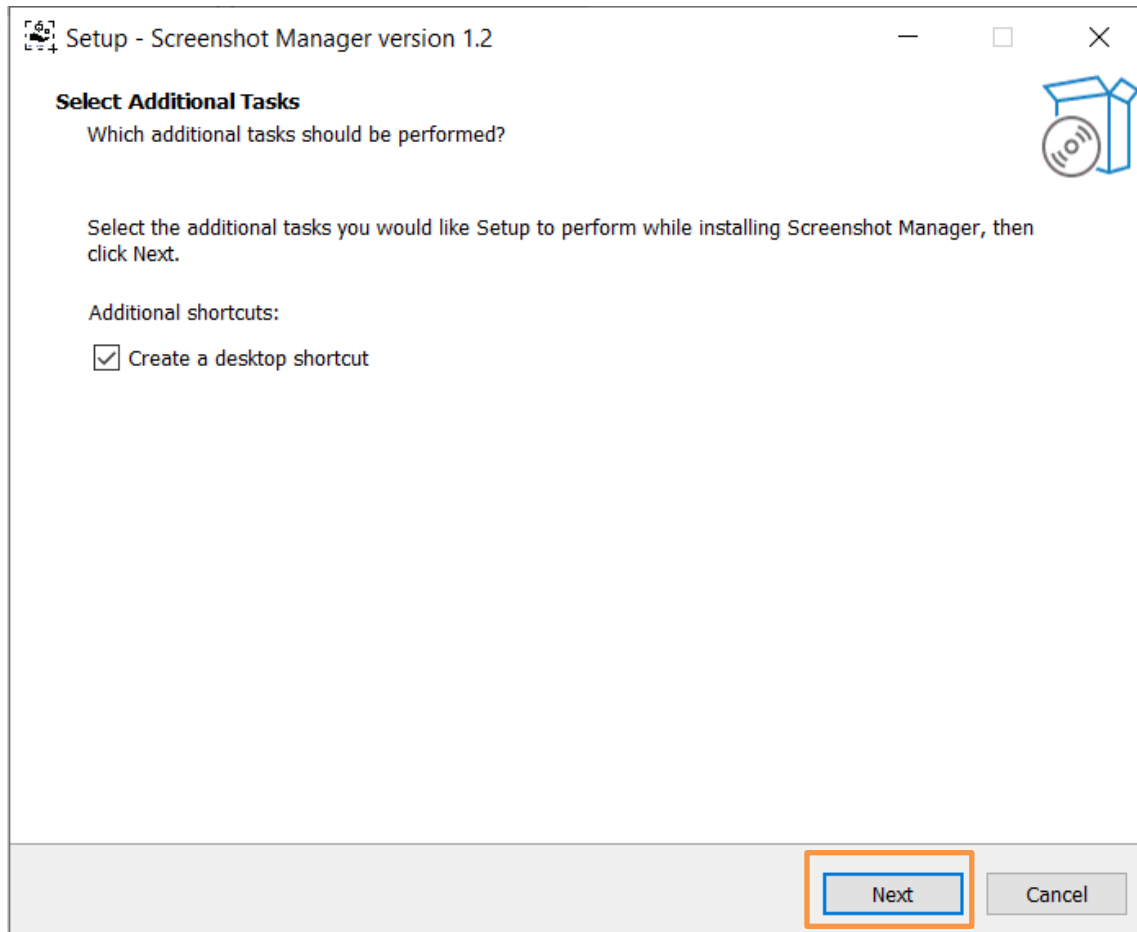

3. After downloading the zip file, extract it and after that you will have one folder named **Screenshot-Manager-main**. Open that folder and You will have some files like shown below:

 LICENSE	30-Jun-21 3:46 PM	File	2 KB
 README.md	30-Jun-21 3:46 PM	MD File	1 KB
 Screenshot Manager	30-Jun-21 3:46 PM	Application	8,244 KB

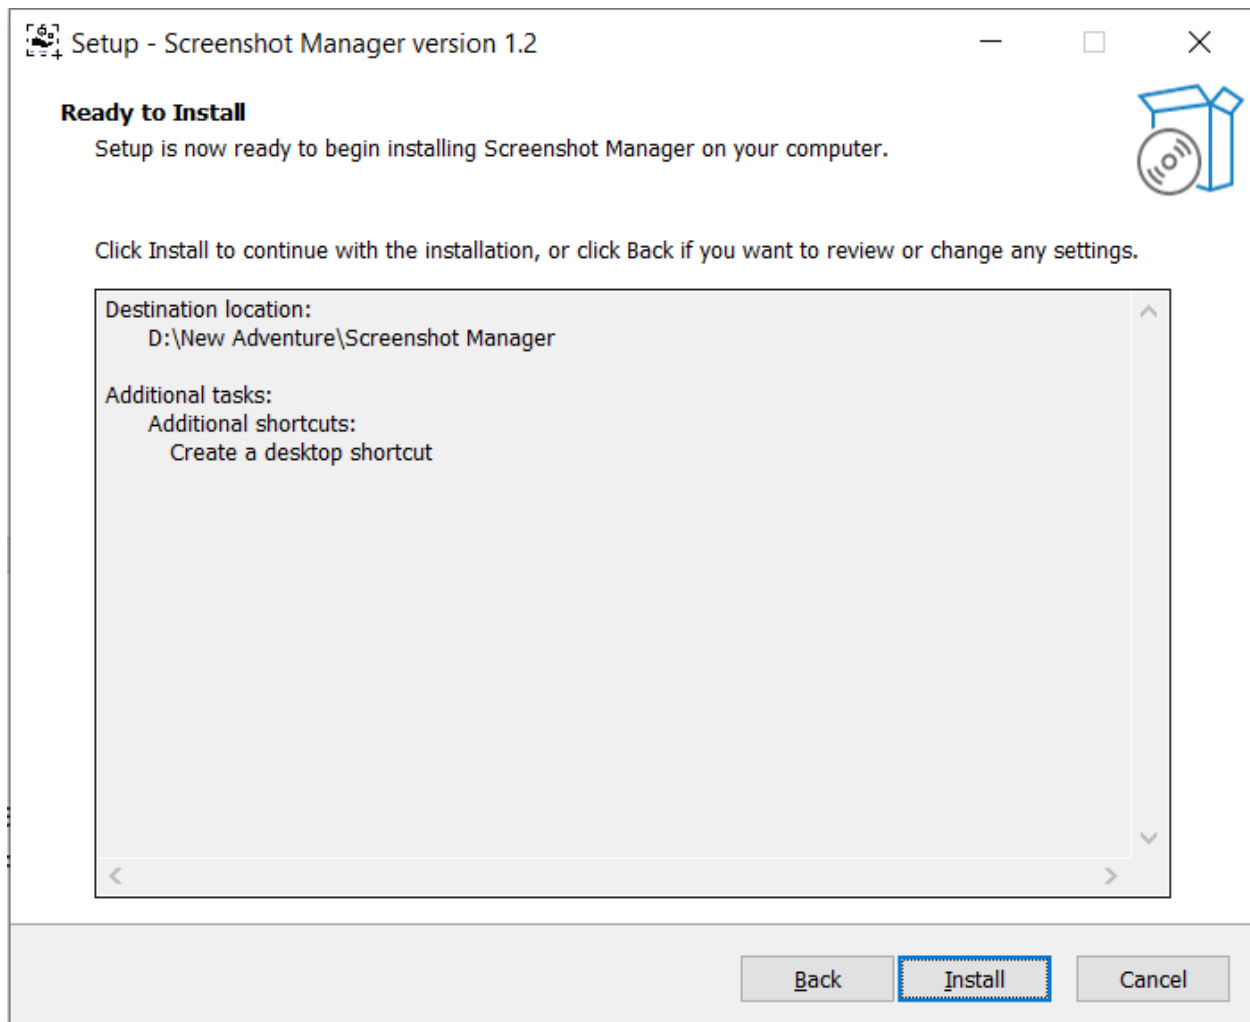

4. Double click on screenshot manager and you will have one setup file open as like shown below, now select where you want to install this app, it will have no effect where you install it. After selecting the folder path click on next.

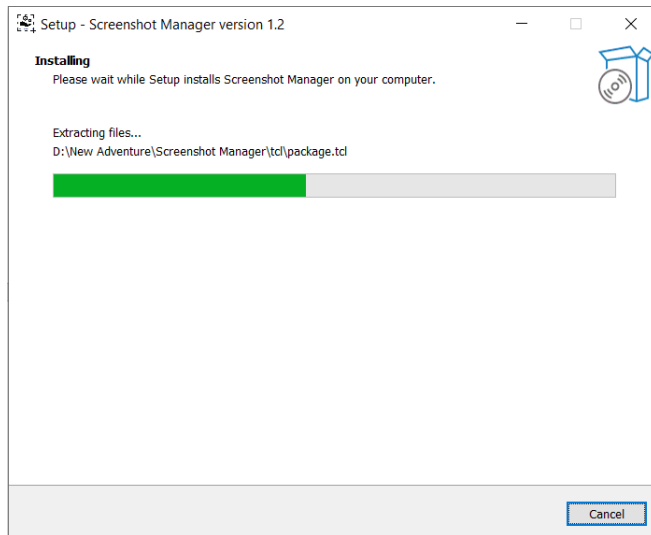

5. after that you will have screen like shown below, if you wish to create desktop shortcut then click on create a desktop shortcut(I will prefer to do so, as it will be beneficial to you to open it immediately whenever you required) and after that click on next.

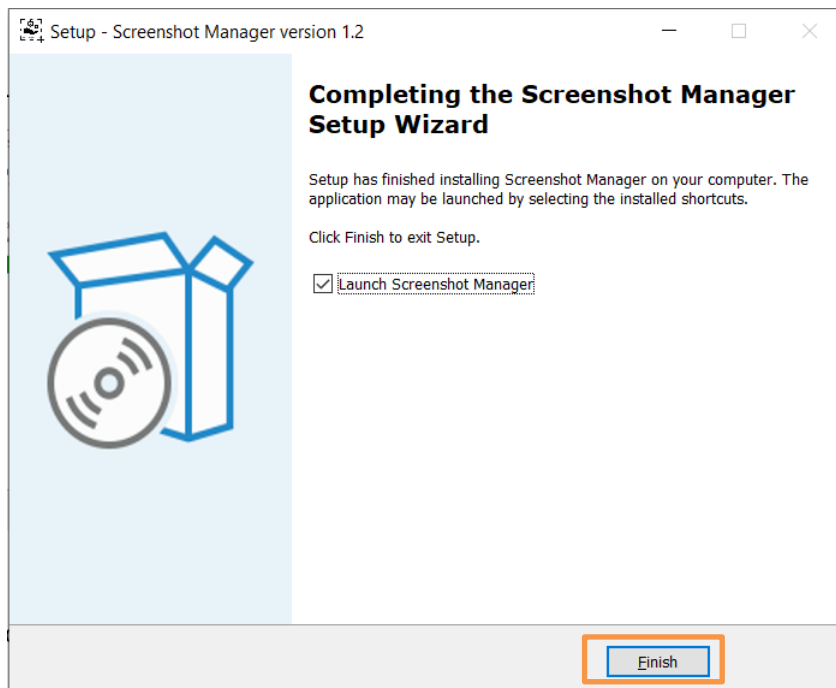

6.Finally it will show you all the selected information and once more confirmation and if you are comfortable then click on install button and if not click on cancel.

7. You will have started installing it and it will something look like this:

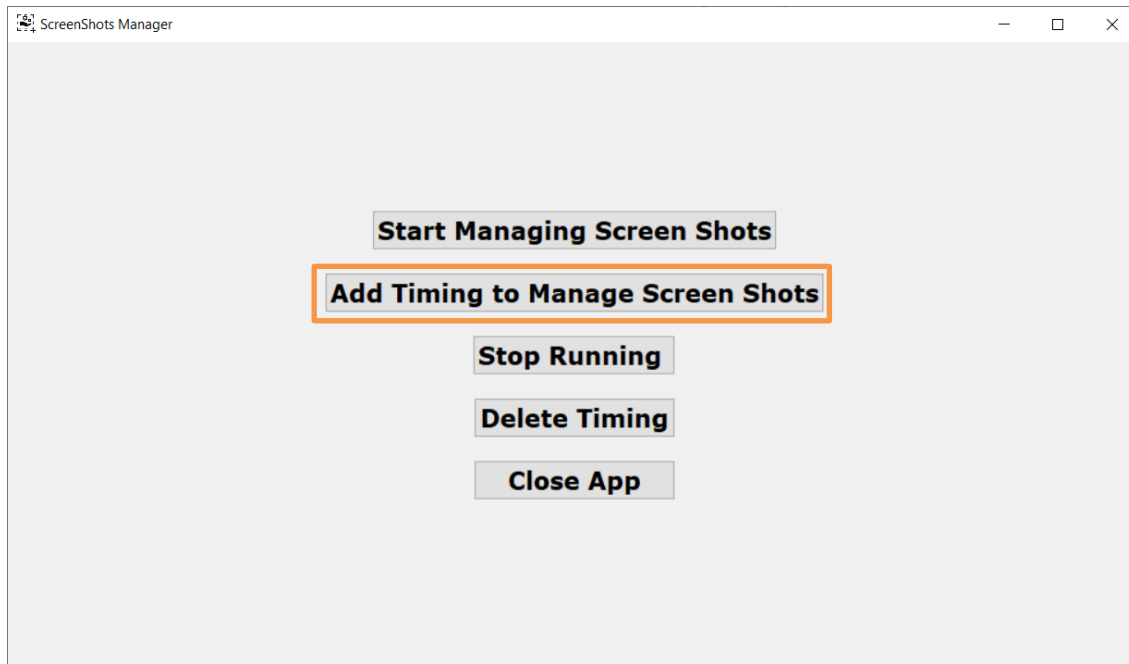

8. And at the end of completion there will be one screen which will ask you to finish setup installation and after installation if you want to launch software automatically then **click on launch screenshot manager.**

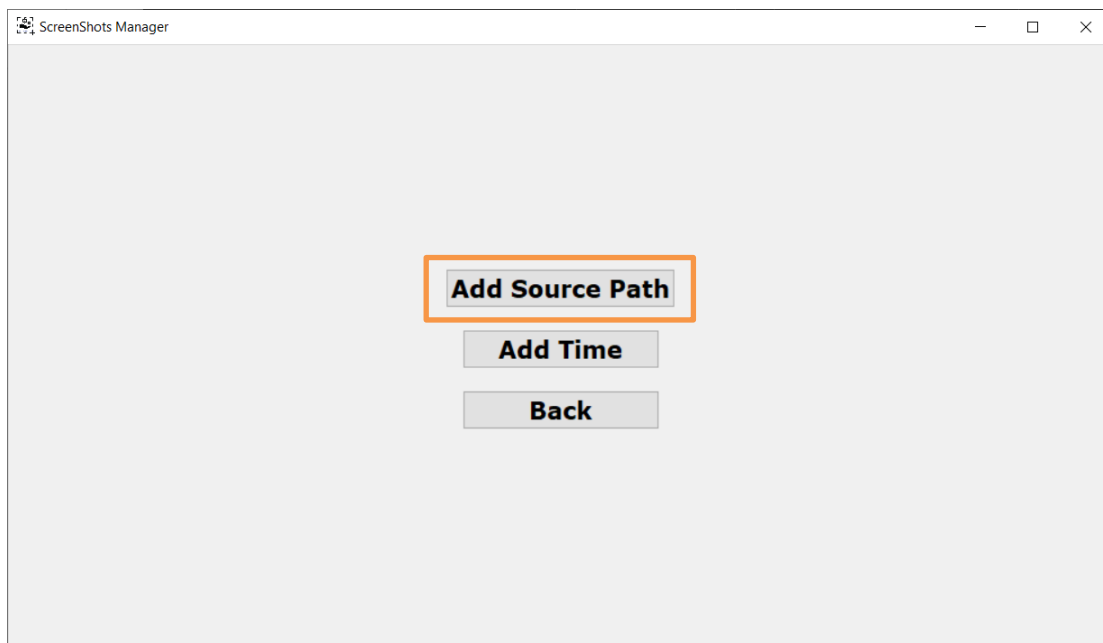

How to Use Screenshot Manager?

1. If you have your app on desktop then open it or if you don't have it on desktop just search in start menu and after that open it. You will have one screen like below, after that click on add timing to manage screen shots.

2. You will have one new screen as shown below, and now click on add source path:

3. New screen will be as shown below, and now you have to enter your screenshot folder, by that, I mean which is the folder where your screenshots gets saved automatically.

By default it is saved at below location

C:\Users\YourUserName\Pictures\Screenshots

Example : my username is Dhairya then this path will be as :

C:\Users\Dhairya\Pictures\Screenshots

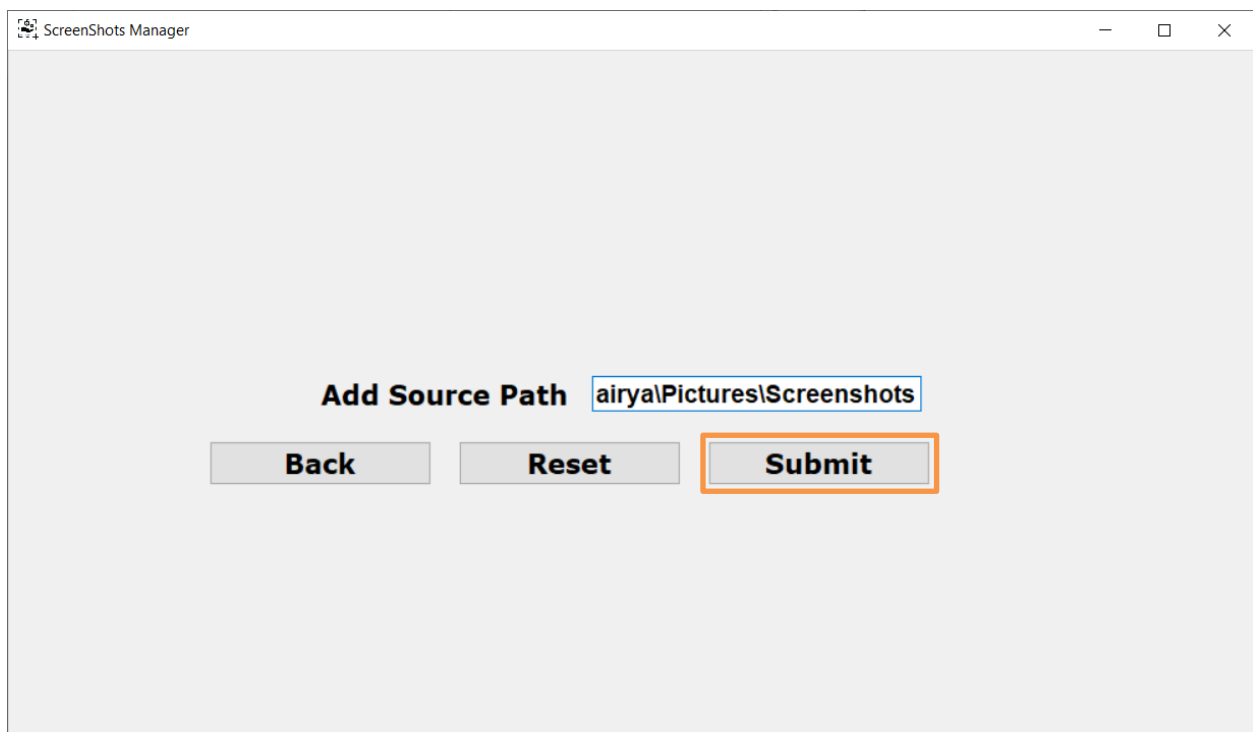

Now you have one question where to see our username(if you don't know) ?

Follow this [article](#)

Note:

1.If you have changed your default setting then you need to enter that folder location.

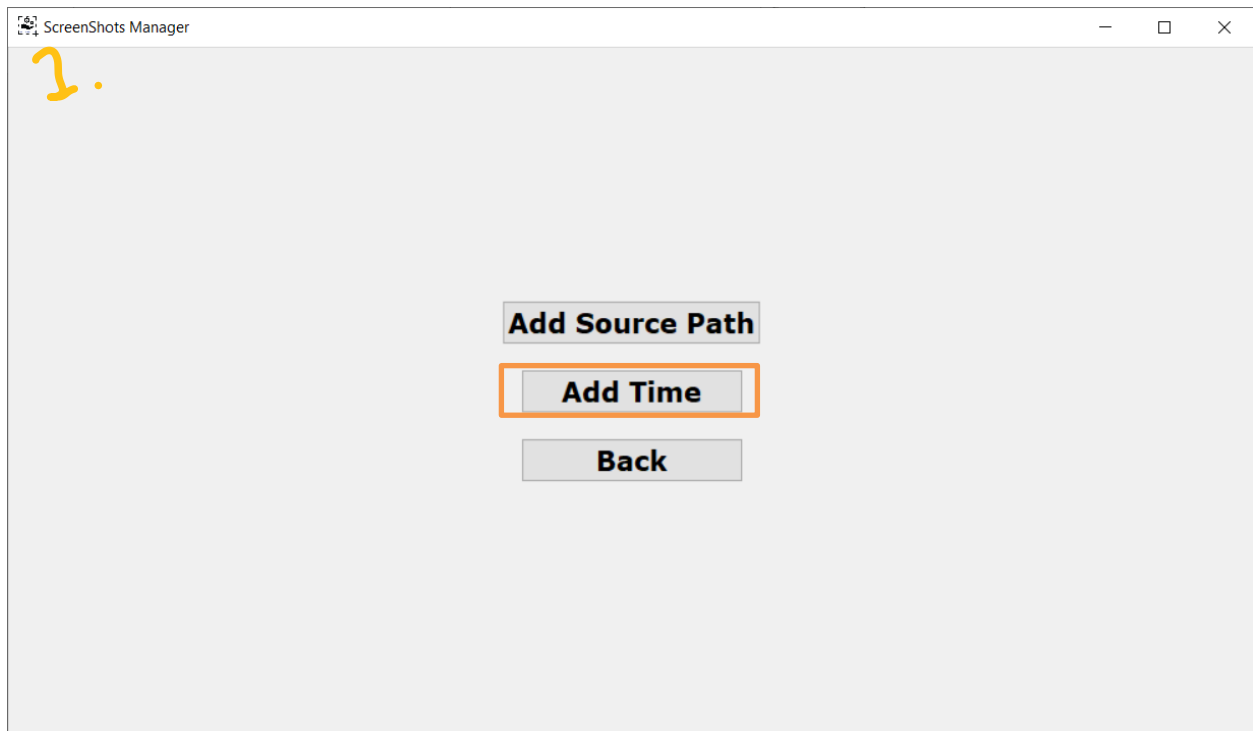

2.To take screenshots you just need to press **windows + prtscr** key.

ScreenShots Manager

Add Source Path

4. After following step 3 you need to go back to below screen and after that you need to click on add time option.

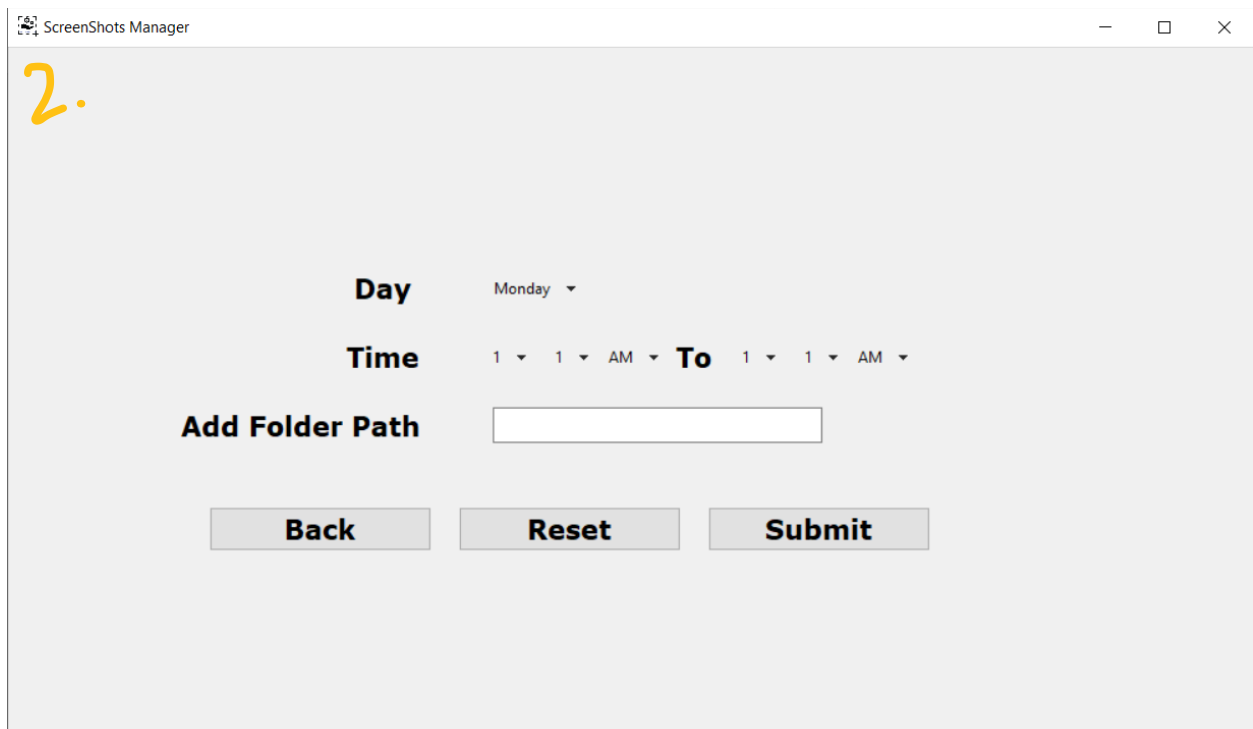

1.

ScreenShots Manager

Add Source Path

Add Time

Back

2.

ScreenShots Manager

Day Monday ▾

Time 1 ▾ 1 ▾ AM ▾ **To** 1 ▾ 1 ▾ AM ▾

Add Folder Path

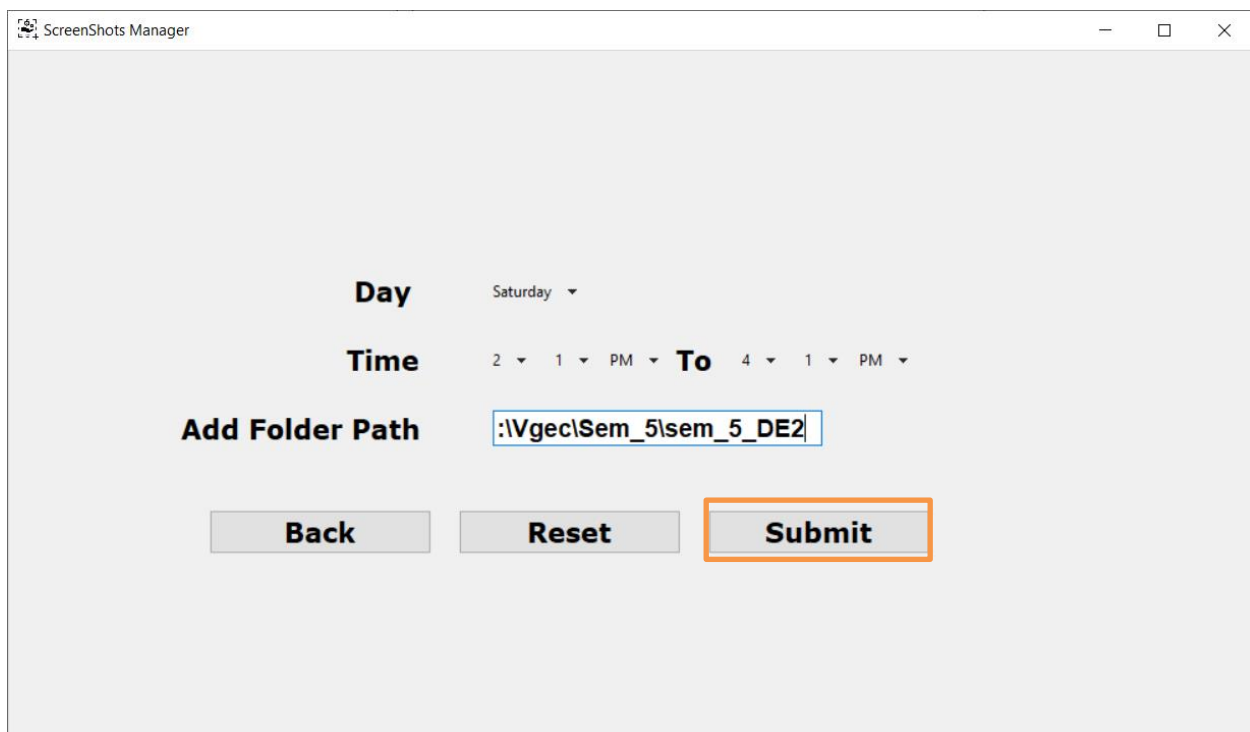

Back **Reset** **Submit**

5. Now according to your Schedule you need to enter time for which you need to take screenshots and want to save it in particular folder. After that just click on submit and enter as many as times you want. **You just need to save time once only.** After that rest of the things will be managed by software itself.

Example:

Suppose I have lecture on Saturday between 2:00 Pm to 4:00 Pm and I want to save my screenshots during this lecture in the folder named as

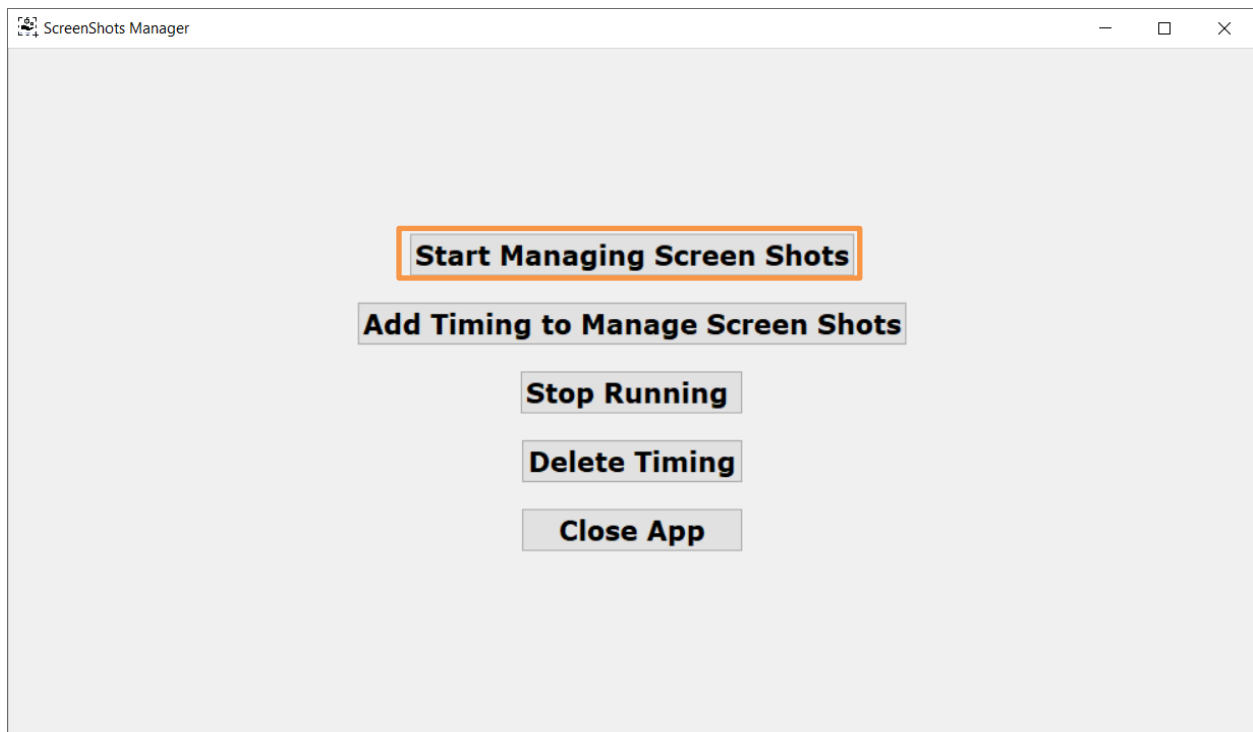

D:\Vgec\Sem_5\sem_5_DE2, then I will fill up the details as mentioned in the below screenshot. After that I just need to click on Submit button.

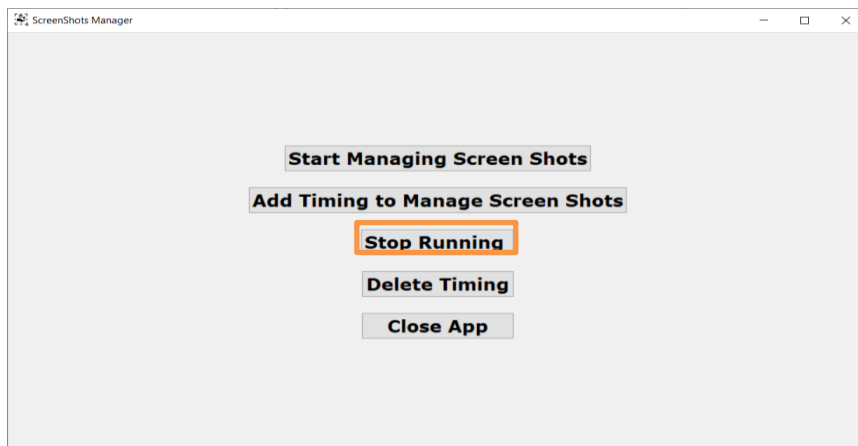

The screenshot shows a window titled "ScreenShots Manager". Inside the window, there are three main input sections: "Day" with a dropdown menu set to "Saturday", "Time" with two dropdown menus for the start and end times (2 and 4) and a "PM" dropdown for the period, and "Add Folder Path" with a text input field containing the path ":\Vgec\Sem_5\sem_5_DE2". At the bottom of the window, there are three buttons: "Back", "Reset", and "Submit". The "Submit" button is highlighted with an orange border.

Now you have to follow this step to enter all the timings of your schedule, and now you are done.

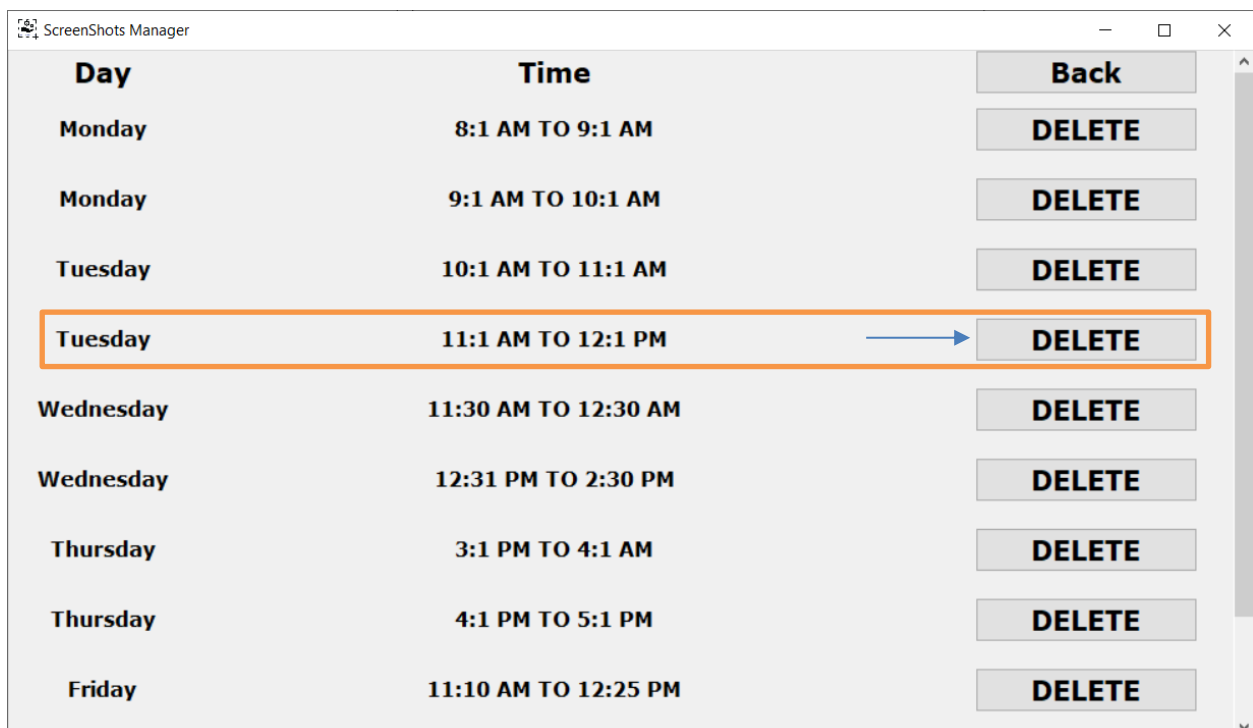

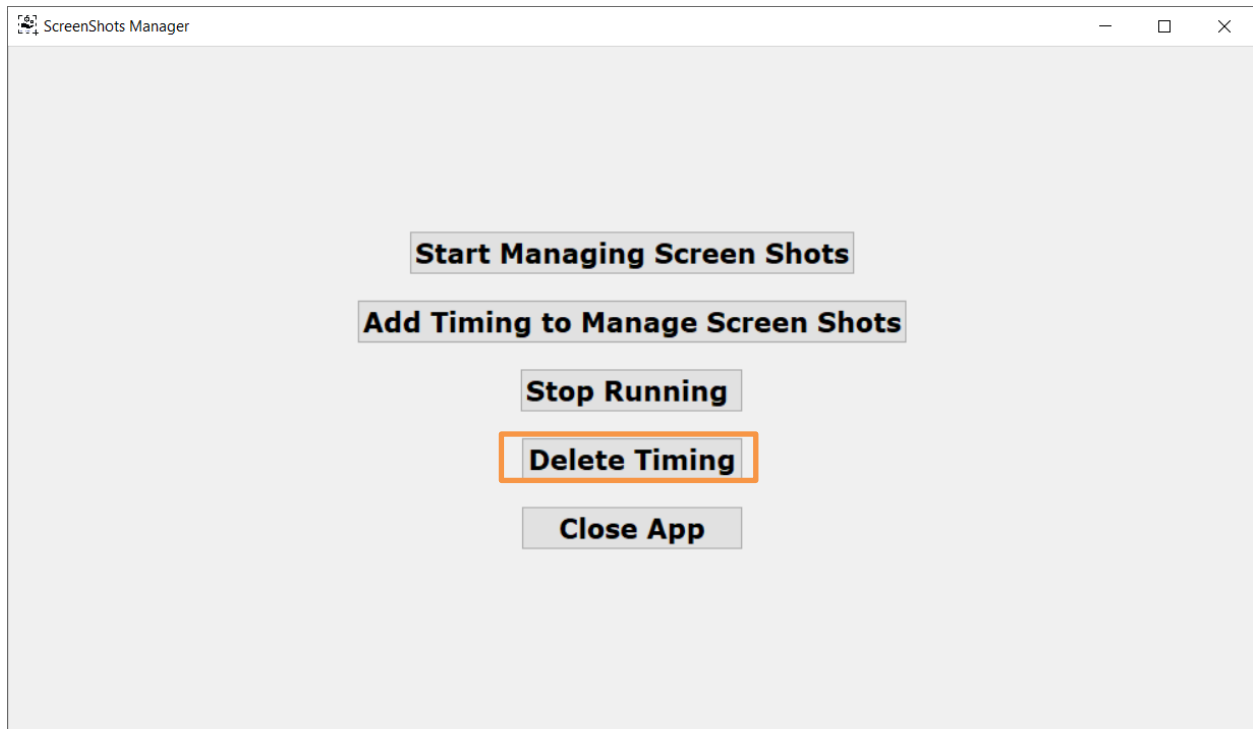

6. After entering all the timings, whenever you want to start managing your screenshots then just click on the button start managing screen shots.

7. Now you have completed your all the classes or you don't want to manage your screenshots then just click on stop running, it will stop script and now your screenshots will be saved to your by default path.

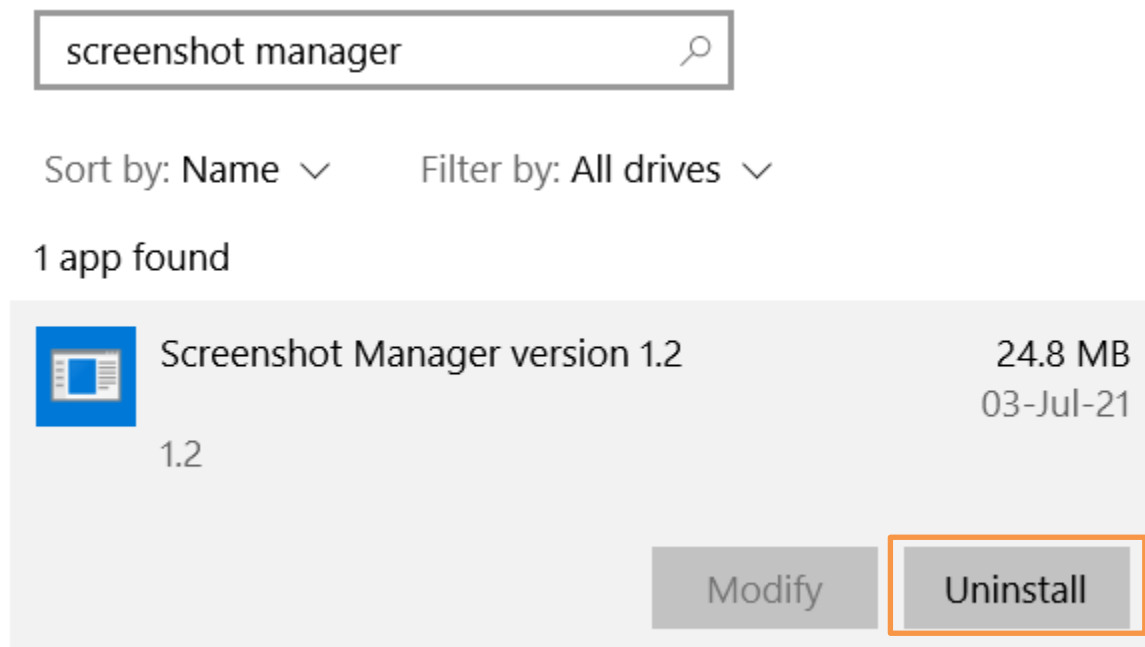

8. Now you have one question that what if we want to delete some timings or you have entered some timings wrongly, don't worry there is one button called delete timing, just click on that you will be shown your all timing, now delete whichever time you want to delete.

How to uninstall Screenshot Manager?

Sorry to hear that you have decided to uninstall screenshot manager, let me know why you have decided to do so?, Uninstall process is very much simple.

1. Go to start menu, search for **apps&features** , and click on it to open. After that it will have one **search** bar where you need to search for **Screenshot Manager**. And you will have first app named as Screenshot Manager Version 1.2, click on that and uninstall it.

2. To completely delete the software, you need to go to the folder where you have installed it and after that you just need to delete two files.

Now it's Completely Gone from Your PC.
